

# GREEN WASTE RECYCLING

Green waste materials are relatively clean, biodegradable, and unnecessarily taking up space in landfills. Recycling yard trimmings will improve the performance of the Wasatch Integrated Waste Management Energy Recovery Facility and will help extend the life of the landfill up to 20 years.

Green waste recycling is a voluntary program for curbside collection of green yard waste. Pickup will be WEEKLY on your normal garbage day. Cost is billed per month.

During the winter months (Dec 1 to March 31) this green waste container may be used for regular household waste.
